Introduction

Change Detection is a monitoring service that reviews selected webpages on a daily, weekly, or monthly basis to identify and track changes that may impact risk, compliance, or business operations. The service can detect updates such as pricing changes, new or modified product information, policy or disclosure revisions, business ownership or name changes, and updates to address or contact information.

Change Detection combines automated webpage monitoring with analyst review to identify meaningful changes while reducing noise from minor updates. Reports provide side-by-side comparisons of current and previous content to help organizations quickly understand what changed and why it may matter.

Organizations commonly use Change Detection to monitor higher-risk merchants (e.g., CBD businesses and negative option subscription models,) track updates to compliance-sensitive webpages, and identify changes in marketing content, products, or pricing.

By providing ongoing visibility into website activity, Change Detection helps organizations proactively assess emerging risks and maintain effective oversight.

Change Detection process at a glance

Change Detection is designed to be a straightforward process. The steps below provide a high-level overview of how monitoring is established, maintained, and reported.

- Upload your website list using the G2RS-provided template.
- G2RS configures monitoring and provides a master list.
- A baseline check is created and monitoring begins.
- Reports are delivered based on your selected cadence.
- Submit monthly updates to website lists, if needed.

How communication works

All Change Detection communication and file exchanges are managed through File Share, which is in the G2RS portal.

Use File Share to:

- **Upload requests**: Submit your data using the "G2RS Change Detection Template."
- **Receive notifications**: Clients receive emails when new reports or updated master lists are available.

©2026 G2 Web Services, Inc. All rights reserved. | **G2RiskSolutions.com**

- **Download deliverables**: Access and download Change Detection reports and updated master lists.

Getting started

To begin monitoring or updating your current sites, upload your website list using the Change Detection update template. G2RS will then review your submission, apply any additions or removals, and provide an updated master list confirming which sites are set up for monitoring. This process is used for both initial setup and ongoing monthly updates.

Steps

- Upload your data using the format found in the "G2RS Change Detection Template" (Excel spreadsheet). Ensure that it includes, at a minimum, the URLs you want to add to the monitoring system.

- If you would like to associate each URL with a specific legal/business name or MID, G2RS can track these elements together in the master list. Please include that information in your submission or provide clear instructions.

- If you already have websites in monitoring, you can update your list each month by submitting the template with your revised information. G2RS will compare your updated list to the current master list to identify which sites and URLs should be added, removed, or maintained.

- G2RS will review submitted sites and include relevant pages in monitoring to ensure comprehensive coverage. **Please note**: Monitoring scope is limited to approximately 300 pages per website. For large websites, such as marketplaces or sites with extensive product catalogs, monitoring every subpage will not be feasible.

- Once processing is complete, G2RS will upload a document titled: "CLIENT NAME - Change Detection - Updated Master List_MM-DD-YYYY." This document serves as confirmation that the requested URLs have been successfully added to monitoring.

- When your sites are set up, monitoring will begin according to your selected cadence.

Recommended monitoring scope

Website content monitored	Area(s) of focus
Header and footer content, including tab names, promotions in banners, and website owner information listed in those places	Ownership/business name changes
	Address changes
	Promotional statement
	Navigation elements (e.g., tab names)
	Billing descriptors (where applicable)
	Payment methods and logos
Home pages, pop-up banners	Ownership/business name changes
	Address changes
	Significant price changes
	Site-wide discounts
	"Going out of business" messaging
	Changes to primary page content or messaging
	Banner updates and pop-ups
	Customer reviews
Product collection pages	Significant pricing changes across multiple products
	Site-wide or large-scale promotional activity
	"Going out of business" or liquidation-style messaging
	Product claims (e.g., health or medical claims)
	Typically found in introductory text sections
Individual product pages (sample) (limit 300 individual product pages)	Significant price changes
	Product claims (e.g., health or medical claims)
	Product descriptions
	Ingredient lists (where applicable)
	Customer reviews
Billing descriptors	Ownership/business name changes
Payment methods listed on footer & product pages	Payment methods used
Terms and conditions	Business ownership changes
	Address and contact information updates
	Billing descriptor changes
	Any content updates or revisions

©2026 G2 Web Services, Inc. All rights reserved. | **G2RiskSolutions.com**

Privacy policy	Business ownership changes
	Address and contact information updates
	Billing descriptor changes
	Any content updates or revisions
Contact page	Business name changes
	Address updates
	Changes to contact details (email, phone)
	Any other content updates

Note: The monitoring scope shown above reflects the pages and content areas typically included in Change Detection. Final monitoring coverage is determined during implementation and may be adjusted based on website size, structure, and page volume.

Monitoring and reporting cadence

Monitoring frequency can be set to daily, weekly, or monthly.

Pages are scanned on the selected schedule, and analysts review any detected changes. Reports are then uploaded to File Share only when meaningful updates are identified—daily, on Fridays (weekly), or at month-end (monthly). Reports focus on meaningful changes identified through analyst review. Minor formatting updates, technical changes, or other non-material modifications may not be included in reporting.

- **Daily**
  G2RS configures the monitoring system to scan each page daily. Analysts review identified changes and upload a report to File Share when meaningful updates are observed each day.

- **Weekly**
  G2RS configures the monitoring system to scan each page once per week. Analysts review identified changes and upload a report to File Share on Fridays when meaningful updates are observed.

- **Monthly**
  G2RS configure the monitoring system to scan each page once per month. Analysts review identified changes and upload a report to File Share on the last day of the month when meaningful updates are observed. *Please note: If the last day of the month falls on a weekend, the report may be uploaded on the next business day.*

Sample reporting timeline

The monitoring system compares the content of each page over time, identifying differences between the current version and the previous version at each review. When websites are first added to the system, an initial scan is performed to establish a baseline or first check. Because this is the first capture of the page, there is no prior version available for comparison. Below please find the reporting timeline for monthly monitoring.

- **Month 1**: The initial scan establishes a baseline, but no report is generated because a previous version of the page does not yet exist for comparison.
- **Month 2**: First comparison occurs and first Change Detection report is delivered.

Change Detection report

The Change Detection report is an Excel-based deliverable. It provides a clear, structured summary of meaningful changes identified over time. The report is designed to help you identify, understand, and act on important updates without having to manually review each page. Reports and updated master lists are delivered through File Share, providing a centralized location for accessing Change Detection deliverables. The report includes the following tabs.

Tab 1: Change report

In this tab, G2RS provides a detailed view of changes identified across monitored pages, including:

- The URL where a change was detected
- The current version of the text
- The previous version of the text for comparison
- Where applicable, a brief note summarizing the change and explaining its significance

Tab 2: Merchant list

A complete list of all sites currently included in your Change Detection account.

Tab 3: Newly identified URLs

When applicable, G2RS provides a list of newly discovered URLs within your monitored websites. Sites are crawled on a quarterly basis to identify newly added URLs, and this tab is included only in reports following those scheduled crawls.

Important documents

Reach out to your G2RS Customer Success representative for a copy of the following documents.

- **G2RS Change Detection Template**
  Submit this template to add, remove, or update websites in your Change Detection account.

- **Sample Change Detection Monthly Report**
  Use this sample report to familiarize yourself with the Change Detection reporting format and the types of website changes identified and documented by G2RS.
